E-learning introduction

Lessons learned

Introduction of a new e-learning

In both participating countries, i.e. Lithuania and the Czech Republic, the events to spread information about the new e-learning possibilities in the project have started. NGO employees and self-employed adults which could benefit from the enhanced skills in website development are contacted and invited to the project introduction.

The events will continue till the end of August. The first feedback from the target group is very interesting, we are glad to hear the participants like the design of the course and its accessibility. Sometimes they find a chapter challenging, depending on their previous experience. Anyway, they appreciate they can come back in the content how many times is needed.

What have we learned in the project?

The project partnership consists of three non-profit, non-governmental organizations, i.e. the project partners were personally involved in the project which was also beneficial for them. It was a unique experience to implement new skills and knowledge directly in the project. Check out the project website to see how we applied our skills!
